

**Listing of claims:**

1. (Previously Presented) A method for making a quilt comprising:

providing a fusible quilt batt comprising a non-woven fibrous web selected to provide loft to a quilt and a thermoplastic adhesive on at least one of an upper surface and a lower surface of the web, wherein the adhesive provides at an elevated temperature a tackiness sufficient to allow the web to be adhered to a quilt top cover material or backing material, removed from the quilt top cover material or backing material at room temperature, and again adhered to a quilt top cover material or backing material at an elevated temperature,

placing a top cover material on the batt so that the adhesive confronts a surface of the top cover material, and

applying heat to the top cover material and the adhesive to increase the tackiness of the adhesive and affix the top cover material to the batt.

2. (Cancelled)

3. (Previously Presented) A method according to Claim 1, further comprising:

removing at least a portion of the top cover material from the batt, repositioning the portion, and replacing the portion on the batt so that the adhesive confronts a surface of the portion, and

applying heat to the top cover material and the adhesive to increase the tackiness of the adhesive and affix the top cover material to the batt.

4. (Cancelled)
5. (Previously Presented) A method according to Claim 1, further comprising:  
using a steam iron to apply heat to the top cover material and the adhesive.
6. (Cancelled)
7. (Previously Presented) A method according to Claim 3, further comprising:  
before or simultaneously with removing at least a portion of the top cover material  
from the batt, applying heat to the top cover material and the adhesive to increase the  
tackiness of the adhesive and thereby hasten removing at least a portion of the top cover  
material from the batt.
8. (Cancelled)
9. (Previously Presented) A method according to Claim 1, further comprising:  
placing a backing material on the batt so that the adhesive confronts a surface of  
backing material, and  
applying heat to the backing material and the adhesive to increase the tackiness of  
the adhesive and affix the backing material to the batt.

10. (Previously Presented) A method according to Claim 9, further comprising:

removing the backing material from the batt, repositioning the backing material, and replacing the backing material on the batt so that the adhesive confronts a surface of the backing material, and

applying heat to the backing material and the adhesive to increase the tackiness of the adhesive and affix the backing material to the batt.

11. (Cancelled)

12. (Cancelled)

13. (Previously Presented) A method according to Claim 10, further comprising:

before or simultaneously with removing at least a portion of the backing material from the batt, applying heat to the backing material and the adhesive to increase the tackiness of the adhesive and thereby hasten removing the backing material from the batt.

14. (Cancelled)

15. (Previously Presented) A method of using a batt in the making of a quilt, comprising:

providing a fusible quilt batt comprising a non-woven fibrous web selected to provide loft to a quilt and a thermoplastic adhesive on at least one of an upper surface and a lower surface of the web, wherein the adhesive provides at an elevated temperature a tackiness sufficient to allow the web to be adhered to a quilt top and/or backing material, removed from the quilt top and/or backing material, and again adhered to the quilt top and/or backing material at an elevated temperature;

placing the web over the quilt top and/or backing material such that the adhesive confronts a surface of the quilt top and/or backing material; and

applying heat and pressure to the batt, whereby the adhesive releasably binds the batt to the quilt top and/or backing material.

16. (Previously Presented) The method of claim 15, further comprising removing the batt from the quilt top and/or backing material.

17. (Original) The method of claim 16, further comprising repositioning the batt with the adhesive confronting the quilt top and/or backing material and applying heat and pressure to the web.

18-26. (Cancelled)

27. (Previously Presented) The method of claim 16, further comprising:  
before or simultaneously with removing the batt from the quilt top and/or backing material, applying heat to the quilt top and/or backing material and the adhesive to increase the tackiness of the adhesive and thereby hasten removing the batt from the quilt top and/or backing material.
28. (Previously Presented) The method of claim 15, further comprising removing the batt from the quilt top and/or backing material at room temperature.
29. (Currently amended) The method of claim 1, wherein a portion of the adhesive binds the fibers of the web together.
30. (Currently amended) The method of claim 15, wherein a portion of the adhesive binds the fibers of the web together.
